Hiring Team — Provider Network Analytics (Job ID 2039725)
Molina Healthcare of Florida
Tallahassee, FL

Dear Hiring Manager and Provider Network Analytics Team,

I am writing to express my enthusiastic interest in the Senior Analyst, Data & Analytics (Provider Network - FL) position (Job ID: 2039725) at Molina Healthcare. As a Tallahassee local resident completing my Master of Science in Analytics at Saint Louis University, I offer over three years of applied experience in healthcare data analytics, provider performance tracking, utilization analysis, and automated data engineering. Having built clinical analytics engines and optimized enterprise data pipelines, I am eager to contribute to Molina Healthcare's mission of delivering cost-effective, high-quality care to vulnerable populations across Florida.

In my role as Graduate Researcher with the SPS Corps Analytics Initiative at Saint Louis University, I collaborate with operational, clinical, and financial stakeholders to deliver actionable analytical solutions and executive dashboards. To support faster reporting and cost-containment analyses, I refactored complex SQL extraction queries across 8+ operational databases using modular CTEs and analytical window functions, slashing query execution latency by 40%. Additionally, I design and maintain interactive Power BI dashboards backed by star-schema models and advanced Excel workbooks (Power Pivot, dynamic modeling formulas) that track operational throughput, resource utilization, and cost benchmarks across departments.

My technical healthcare experience directly complements Molina's provider network priorities. In my CareGap analytics platform, I analyzed 34,000+ longitudinal patient records using columnar DuckDB and PostgreSQL to evaluate quality performance metrics, clinical care-gap closure rates, and cost drivers. For the WashU Clinical Analytics Datathon, I engineered an end-to-end predictive pipeline across 62,000+ clinical records, developing 59 predictive features (visit frequency, medication count, volatility) to isolate high-risk utilization cohorts (AUC 0.8520). Furthermore, I established automated Independent Verification & Validation (IV&V) frameworks that detect schema drift and reconcile transaction discrepancies, ensuring total data fidelity and adherence to strict HIPAA standards.

Being physically based in Tallahassee, Florida, I bring immediate availability, local regional alignment, and a deep dedication to supporting Molina's Florida provider networks and state-mandated regulatory reporting. I would welcome the opportunity to discuss how my technical expertise in SQL, Power BI, and healthcare predictive modeling can support Molina Healthcare's strategic objectives. Thank you for your time, consideration, and review.

Sincerely,

**Asmi Basnet**
