SUMMARY

Quantitative analyst and AI engineer (M.S. Analytics, Saint Louis University) who writes SQL and Python to analyze business data, builds Power BI and Tableau dashboards for leadership, and builds LLM-based tools with automated data-quality and validation checks. Experienced in regression and forecasting, and in explaining results to non-technical stakeholders.

EDUCATION

Saint Louis University **St. Louis, MO**
Master's in Analytics (STEM) *May 2026*
Relevant Coursework: Machine Learning & AI, Deep Learning (CNN, RNN, LSTM, Transformers), LLM Fine-Tuning & Prompt Engineering, Cloud Data Architecture, Database Design.

Tribhuvan University **Kathmandu, Nepal**
Bachelor of Engineering in Electronics & Communication Engineering (STEM) *2017 – 2022*

EXPERIENCE

Saint Louis University **St. Louis, MO**
Graduate Researcher, SPS Corps – Analytics Initiative *August 2025 – Present*

- Built a hybrid forecasting engine (Prophet and LSTM) with automated anomaly detection, giving leadership budget and demand forecasts with flagged outliers each quarter.
- Analyzed student retention with regression, hypothesis tests and cohort analysis in Python and R, and turned findings into resource-allocation recommendations for leadership.
- Wrote SQL (CTEs, window functions) across 8+ operational tables as the data layer for reports and an AI assistant, and documented a data dictionary.
- Wrote automated data-quality checks (referential integrity, schema drift detection) that stop bad records from reaching reports and the assistant (FERPA).
- Built a RAG decision assistant (Ollama, OpenAI API, vector index) so non-technical staff can query institutional data in plain English instead of requesting custom SQL.

Saint Louis University **St. Louis, MO**
Data Analyst Intern / BI Developer *June 2024 – August 2024*

- Built 6 Power BI and Tableau dashboards on star-schema models, tracking 15+ institutional KPIs for leadership.
- Wrote and tuned SQL for automated institutional reporting (multi-table joins, window functions, CTEs).

Entegra Sources Pvt Ltd. (Mayahold Group) **Remote / Kathmandu, Nepal**
Data Analyst / Researcher & Systems Analyst *December 2022 – July 2023*

- Cleaned and mapped survey, transactional and operational data into standardized relational schemas using Python (Pandas, SQLAlchemy) and SQL.
- Analyzed 5,000+ survey responses in SPSS and R (regression, ANOVA, chi-square) and wrote methodology and audit documentation.
- Tested C/C++ and Python logic for error handling and fault tolerance, and reconciled outputs against source data.

PROJECTS

PolicyGuard – Offline RAG Compliance Suite (Python, Ollama, ChromaDB, FastAPI, Streamlit, Docker Compose)

- Built a fully offline retrieval-augmented generation pipeline using local Ollama models (Qwen 2.5, Llama 3), ChromaDB vector search and a FastAPI backend, containerized with Docker Compose, to keep sensitive policy documents on the machine while still answering compliance questions.
- Engineered a chain-of-thought verification step that validates citations, flags contradictory policies (FLAG_CONFLICT) and requests missing context (CLARIFY), and aggregates the conflicts into a governance health score so reviewers see sourced conflicts instead of reading whole handbooks.

CareGap – Clinical Risk Prototype, Synthetic Data (Python, DuckDB, XGBoost, SHAP, FAISS, Streamlit)

- Trained Lasso, Random Forest and XGBoost models on 34,000+ synthetic (Synthea) patient records stored in DuckDB to predict diabetes and hypertension deterioration, and added per-patient SHAP explanations and a what-if simulator to make each risk score interpretable.
- Developed a FAISS-backed RAG assistant with automatic failover from a local Phi-3 model to Gemini 1.5 Flash and guardrails that block dosage suggestions, so the tool stays available and within safe limits when the local model fails.

Multi-Agent Financial Research System (Python, Agno, OpenAI GPT-4o, Zapier, REST APIs)

- Built two cooperating Agno agents (Market Scout, Financial Analyst) on GPT-4o with tool execution and iterative query refinement over REST APIs to convert live market news into structured research briefs.
- Automated alert handling with Zapier webhooks that triage incoming alerts, score their priority and send summaries, so high-priority items surface without manual review.

TECHNICAL TOOLS

Data, Analytics & BI: SQL (PostgreSQL, SQL Server, DuckDB, SQLite, Snowflake, BigQuery: CTEs, Window Functions, Joins), Python (Pandas, NumPy, SQLAlchemy), R, SPSS, Excel, Dimensional Modeling, ETL, Power BI, Tableau, KPI Design
Statistics & Forecasting: Regression, Hypothesis Testing, ANOVA, Cohort Analysis, Prophet, LSTM, scikit-learn, XGBoost
AI & Automation: RAG, LLMs (Ollama, OpenAI API, Gemini API), Vector Search (FAISS, ChromaDB), Prompt Engineering, Guardrails, Agno, Zapier, FastAPI, Docker, Git
